-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 January 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.

DETAILED ACTION

1. Claims 1-20 are remained.
2. The Examiner acknowledges Applicant's amendment filed on 01/29/04 and therefore withdraws the previous 35 U.S.C. 112, first rejection regarding this matter.

Claim Rejections - 35 USC § 103

- 3 The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Keiser et al (Hereinafter Keiser U.S. Patent No.6, 505, 174) in view of Wallman. (U.S. Patent No.6, 601, 044).

As per claim 1, Keiser discloses an investment system comprising: an investment vehicle the investment vehicle ("i. e, financial management system") and enabling an investor ("i. e, client computers") to selectively ("i. e, see column 2 line 60") buy and sell interests("i. e, asset rights ") in each of a plurality of different individual securities traded and on at least one financial market.(Note abstract and See column 2 lines 10-20) and a graphical user interface.(see column 2 lines 60-65).

Keiser fails to teach, wherein for each of the plurality of individual securities, interests in the security which are bought or sold by the investor can correspond to a selected fractionalized market unit of the security, wherein the investment system enables the investor to organize using graphical user interface, holdings in the corresponding accounts into one or more groups that can be defined by the investors to suit the investors portfolio structuring desires, and wherein, the investor can specify an allocation factor for each security and for each group included in the account, the allocation factor for a group specifying a percentage of a total amount to be used to

Art Unit: 3628

purchase interests in securities for the account, and the allocation factor for a security specifying a percentage of a total amount to be to be used to purchase interests in securities for the group in which the security is located, or if the security is not in a group, a percentage of the total amount to be used to purchase interests in securities for the account .

However Wallman disclose a computer-based system, without incurring any additional costs, investors to purchase or sell small-and even fractional-units of shares. (See column 21 lines 15-60) and an investor program that allows an investor to create and modify an investor portfolio according to the investor's desired.(see column 12 line 50 and column 17 lines 20-30 and column 19 lines 45-65 and column 20 line 5-15) and additionally, if a group of investors so desire, the investors can all provide information to the system so that other investors who they permit or who are in their same group can have access to the overall portfolio of the group as a whole--either for monitoring purposes or for analysis or for trade execution. In such instance the system would identify the group as a separate group within the general demographic database, and access to the portfolio and securities maintained by the group or the leaders of the group would be permitted to members of the group.(see column 40 lines 30-35) and allocating a total dollar amount being invested by the investor among a plurality of assets or liabilities meeting a criteria entered by the investor by allocating to each of the plurality of assets or liabilities one of equal dollar amounts and capitalization-weighted dollar amounts.(See column 51 lines 25-30) and in addition, the system of the present invention optionally includes an investor program executing on an investor's personal computer, which program prompts the investor for investor identification information and investor preferences, transmits investor identification and investor preferences to the processor, and enables the investor to interact with the processor to select multiple assets/liabilities to create an investor portfolio commensurate with the percentage allocation of investment assets. The investor program can include a graphical investor interface displaying a risk and a differential return of the entire investor portfolio relative to standard industry measurements to the investor and on absolute scales. Also, the investor program enables the investor to adjust the percentage allocation of investment

Art Unit: 3628

assets and the investor portfolio. Moreover, the investor program communicates to the processor as trading data via one of the communication links investor identification information along with any trades of assets/liabilities to be executed to create or modify an investor's portfolio to ensure an investor's actual portfolio matches an investor's desired portfolio. (see column 12 lines 35-50) and unlike all traditional brokerages that charge a commission or a fee based on a per transaction basis, or that receive their compensation (including items like payment for order flow) on a per share or per trade basis because they make their money from investors trading, the investor under the present invention can be charged a flat periodic fee (such as a monthly or annual fee as might be charged by certain financial planners) or an asset based fee comprised of a certain amount of the assets held in the system (such as are usually charged by mutual funds), or a combination of such periodic and asset based fees, or a combination of such fees and a transaction based fee.(see column 12 line 65 and column 13 line 5) and allocation factor for security specifying a percentage of total amount(See column 26 lines 10-25 and column 27 lines 30-35 and column 11 lines 30-40).

Therefore it would have been to one of ordinary skill in the art at the time the invention was made to modify the teachings of Keiser to include wherein for each of the plurality of individual securities, interests in the security which are bought or sold by the investor can correspond to a selected fractionalized market unit of the security, wherein the investment system enables the investor to organize using graphical user interface, holdings in the corresponding accounts into one or more groups that can be defined by the investors to suit the investors portfolio structuring desires, and wherein, the investor can specify an allocation factor for each security and for each group included in the account, the allocation factor for a group specifying a percentage of a total amount to be used to purchase interests in securities for the account, and the allocation factor for a security specifying a percentage of a total amount to be to be used to purchase interests in securities for the group in which the security is located, or if the security is not in a group, a percentage of the total amount to be used to purchase interests in securities for the account taught by Wallman in order to electronically trade and invest in securities or other assets, rights or liabilities, such as commodities or futures. More

Art Unit: 3628

particularly, the present invention relates to a method and apparatus for electronically trading over wired and wireless networks, including over the Internet, and investing in securities or other assets, rights or liabilities that enables a user, at a reasonable cost, to create and manage a complex and diversified portfolio of such securities or other assets, rights or liabilities.

As per claims 2, 8-12 Keiser discloses an investment vehicle("i. e, financial management system") for enabling a plurality of investors to selectively.("i. e, see column 2 line 60") buy and sell interests ("i. e, assets rights") in each of a plurality of different individual securities traded on at least one financial market, comprising: a plurality of accounts through which the plurality of investors ("i. e, client computers") can buy and sell the interests ("i. e, assets rights") in the plurality of securities, each of the accounts corresponding to at least one of the plurality of investors (Note abstract and see column 2 line 60 and lines 10-20 and column) and a graphical user interface.(see column 2 lines 60-65).

Keiser fails to teach wherein, for each of the plurality of individual securities, interests in the security which are bought or sold by the at least one investor can correspond to a selected fractionalized market unit of the security, and wherein the investment vehicle enables the investors to organizing holdings in the corresponding accounts into one or more groups that can be defined by the investors to suit the investors portfolio structuring desires and wherein for each account, the corresponding investor can specify an allocation factor for each security and for each group included in the account, the allocation factor for a group specifying a percentage of a total amount to be used to purchase interests in securities for the account in which the group is located, and the allocation factor for a security specifying a percentage of a total amount to be to be used to purchase interests in securities for the group in which the security is located, or if the security is not in a group, a percentage of the total amount to be used to purchase interests in securities for the account in which the security is located .

Wallman disclose a computer-based system, without incurring any additional costs, investors to purchase or sell small and even fractional-units of shares.(See column 21 lines 15-60) and an investor program that allows an investor to create and modify an

Art Unit: 3628

investor portfolio according to the investor's desired.(see column 12 line 50 and column 17 lines 20-30 and column 19 lines 45-65 and column 20 line 5-15) and additionally, if a group of investors so desire, the investors can all provide information to the system so that other investors who they permit or who are in their same group can have access to the overall portfolio of the group as a whole--either for monitoring purposes or for analysis or for trade execution. In such instance the system would identify the group as a separate group within the general demographic database, and access to the portfolio and securities maintained by the group or the leaders of the group would be permitted to members of the group.(see column 40 lines 30-35) and allocating a total dollar amount being invested by the investor among a plurality of assets or liabilities meeting a criteria entered by the investor by allocating to each of the plurality of assets or liabilities one of equal dollar amounts and capitalization-weighted dollar amounts.(See column 51 lines 25-30)and in addition, the system of the present invention optionally includes an investor program executing on an investor's personal computer, which program prompts the investor for investor identification information and investor preferences, transmits investor identification and investor preferences to the processor, and enables the investor to interact with the processor to select multiple assets/liabilities to create an investor portfolio commensurate with the percentage allocation of investment assets. The investor program can include a graphical investor interface displaying a risk and a differential return of the entire investor portfolio relative to standard industry measurements to the investor and on absolute scales. Also, the investor program enables the investor to adjust the percentage allocation of investment assets and the investor portfolio. Moreover, the investor program communicates to the processor as trading data via one of the communication links investor identification information along with any trades of assets/liabilities to be executed to create or modify an investor's portfolio to ensure an investor's actual portfolio matches an investor's desired portfolio. (see column 12 lines 35-50) and unlike all traditional brokerages that charge a commission or a fee based on a per transaction basis, or that receive their compensation (including items like payment for order flow) on a per share or per trade basis because they make their money from investors trading, the investor under the

Art Unit: 3628

present invention can be charged a flat periodic fee (such as a monthly or annual fee as might be charged by certain financial planners) or an asset based fee comprised of a certain amount of the assets held in the system (such as are usually charged by mutual funds), or a combination of such periodic and asset based fees, or a combination of such fees and a transaction based fee.(see column 12 line 65 and column 13 line 5) and allocation factor for security specifying a percentage of total amount(See column 26 lines 10-25 and column 27 lines 30-35 and column 11 lines 30-40).

Therefore it would have been to one of ordinary skill in the art at the time the invention was made to modify the teachings of Keiser to include wherein, for each of the plurality of individual securities, interests in the security which are bought or sold by the at least one investor can correspond to a selected fractionalized market unit of the security, and wherein the investment vehicle enables the investors to organizing holdings in the corresponding accounts into one or more groups that can be defined by the investors to suit the investors portfolio structuring desires and wherein for each account, the corresponding investor can specify an allocation factor for each security and for each group included in the account, the allocation factor for a group specifying a percentage of a total amount to be used to purchase interests in securities for the account in which the group is located, and the allocation factor for a security specifying a percentage of a total amount to be to be used to purchase interests in securities for the group in which the security is located, or if the security is not in a group, a percentage of the total amount to be used to purchase interests in securities for the account in which the security is located taught by Wallman in order to electronically trading and investing in securities or other assets, rights or liabilities, such as commodities or futures. More particularly, the present invention relates to a method and apparatus for electronically trading over wired and wireless networks, including over the Internet, and investing in securities or other assets, rights or liabilities that enables a user, at a reasonable cost, to create and manage a complex and diversified portfolio of such securities or other assets, rights or liabilities.

Art Unit: 3628

As per claims 3,13-16, Keiser discloses an investment vehicle for enabling a plurality of investors to selectively buy and sell interests in each of a plurality of different individual securities traded on at least one financial market, comprising: a plurality of accounts through which the plurality of investors ("i. e, client computers") can transmit orders to buy and sell the interests ("i. e, assets rights") in the plurality of securities, each of the accounts corresponding to at least one of the plurality of investors.(Note abstract and see column 2 lines 10-20) and graphical user interface.(see column 2 lines 60-65).

Keiser fails to teach wherein each of the investors is charged a fixed commission for each order that is accepted and acted upon by the investment vehicle on behalf of the investor and the commission being determined irrespective of the number of different securities that are involved with the order, the number of shares of each security involved in the order, the value of the investor's portfolio, and the fact that the order may include requests to both buy and sell interests in securities, and wherein each of the securities involved in the order is allocated a percentage of the commission charged, the percentage being derived by dividing the value of the interest of each security purchased or sold by the total value of the interests of all the securities purchased or sold and wherein the graphical user interface provides the investors with dynamically re-configurable building blocks, each representing at least one of a security and a group of securities held in the accounts, to enable the investors to build , re configure and manage the accounts in a visually intuitive manner and to visually offer the investors portfolio information for accounts.

However Wallman discloses and unlike all traditional brokerages that charge a commission or a fee based on a per transaction basis, or that receive their compensation (including items like payment for order flow) on a per share or per trade basis because they make their money from investors trading, the investor under the present invention can be charged a flat periodic fee (such as a monthly or annual fee as might be charged by certain financial planners) or an asset based fee comprised of a certain amount of the assets held in the system (such as are usually charged by mutual funds), or a combination of such periodic and asset based fees, or a combination of

Art Unit: 3628

such fees and a transaction based fee.(see column 12 line 65 and column 13 line 5) and a computer-based system, without incurring any additional costs, investors to purchase or sell small--and even fractional-units of shares.(See column 21 lines 15-60) and additionally, if a group of investors so desire, the investors can all provide information to the system so that other investors who they permit or who are in their same group can have access to the overall portfolio of the group as a whole--either for monitoring purposes or for analysis or for trade execution. In such instance the system would identify the group as a separate group within the general demographic database, and access to the portfolio and securities maintained by the group or the leaders of the group would be permitted to members of the group.(see column 40 lines 30-35) and allocating a total dollar amount being invested by the investor among a plurality of assets or liabilities meeting a criteria entered by the investor by allocating to each of the plurality of assets or liabilities one of equal dollar amounts and capitalization-weighted dollar amounts.(See column 51 lines 25-30) and in addition, the system of the present invention optionally includes an investor program executing on an investor's personal computer, which program prompts the investor for investor identification information and investor preferences, transmits investor identification and investor preferences to the processor, and enables the investor to interact with the processor to select multiple assets/liabilities to create an investor portfolio commensurate with the percentage allocation of investment assets. The investor program can include a measurements to the investor and on absolute scales. Also, the investor program enables the investor to adjust the percentage allocation of investment assets and the investor portfolio. Moreover, the investor program communicates to the processor as trading data via one of the communication links investor identification information along with any trades of assets/liabilities to be executed to create or modify an investor's portfolio to ensure an investor's actual portfolio matches an investor's desired portfolio. (see column 12 lines 35-50) and allocation factor for security specifying a percentage of total amount(See column 26 lines 10-25 and column 27 lines 30-35 and column 11 lines 30-40) and an investor program that allows an investor to create and modify an investor portfolio

Art Unit: 3628

according to the investor's desired.(see column 12 line 50 and column 17 lines 20-30 and column 19 lines 45-65 and column 20 line 5-15)

Therefore it would have been to one of ordinary skill in the art at the time the invention was made to modify the teachings of Keiser to include teach wherein each of the investors is charged a fixed commission for each order that is accepted and acted upon by the investment vehicle on behalf of the investor and the commission being determined irrespective of the number of different securities that are involved with the order, the number of shares of each security involved in the order, the value of the investor's portfolio, and the fact that the order may include requests to both buy and sell interests in securities, and wherein each of the securities involved in the order is allocated a percentage of the commission charged, the percentage being derived by dividing the value of the interest of each security purchased or sold by the total value of the interests of all the securities purchased or sold and wherein the graphical user interface provides the investors with dynamically re-configurable building blocks, each representing at least one of a security and a group of securities held in the accounts, to enable the investors to build , re configure and manage the accounts in a visually intuitive manner and to visually offer the investors portfolio information for accounts taught by Wallman in order to for the investor to pay for services provided by the investment vehicle.

As per claims 4, 17-19, Keiser disclose an investment vehicle("i. e, financial management system") for enabling a plurality of investors("i. e, client computers") to selectively ("i. e, see column 2 line 60) buy and sell interests("i. e, assets rights") in each of a plurality of different individual securities traded on at least one financial market, comprising:

a plurality of accounts through which the plurality of investors can buy and sell the interests in the plurality of securities, each of the accounts corresponding to at least one of the plurality of investors(See column 2 lines 10-20 and column 2 line 60).

However Keiser fails to teach wherein the investment vehicle enables the investors to organize using graphical user interface, holdings in the corresponding accounts into one or more groups that can be defined by the investors to suit the investors portfolio

Art Unit: 3628

structuring desires, wherein for each account, the corresponding investor can specify an allocation factor for each security, for each group and for each sub-group included in the account, the allocation factor for a group specifying a percentage of a total amount to be used to purchase interests in securities for the account in which the group is located, the allocation factor for a sub-group specifying a percentage of a total amount to be used to purchase interests in securities for the group in which the sub-group is located, and the allocation factor for a security specifying a percentage of a total amount to be to be used to purchase interests in securities for the group or sub-group in which the security is located, or if the security is not in a group or sub-group, a percentage of the total amount to be used to purchase interests in securities for the account in which the security is located.

Wallman disclose an investor program that allows an investor to create and modify an investor portfolio according to the investor's desired.(see column 12 line 50 and column 17 lines 20-30 and column 19 lines 45-65 and column 20 line 5-15) and a computer-based system, without incurring any additional costs, investors to purchase or sell small-and even fractional-units of shares.(See column 21 lines 15-60) and additionally, if a group of investors so desire, the investors can all provide information to the system so that other investors who they permit or who are in their same group can have access to the overall portfolio of the group as a whole-either for monitoring purposes or for analysis or for trade execution. In such instance the system would identify the group as a separate group within the general demographic database, and access to the portfolio and securities maintained by the group or the leaders of the group would be permitted to members of the group.(see column 40 lines 30-35) and allocating a total dollar amount being invested by the investor among a plurality of assets or liabilities meeting a criteria entered by the investor by allocating to each of the plurality of assets or liabilities one of equal dollar amounts and capitalization-weighted dollar amounts.(See column 51 lines 25-30)and in addition, the system of the present invention optionally includes an investor program executing on an investor's personal computer, which program prompts the investor for investor identification information and investor preferences, transmits investor identification and investor preferences to the processor, and enables the

Art Unit: 3628

investor to interact with the processor to select multiple assets/liabilities to create an investor portfolio commensurate with the percentage allocation of investment assets. The investor program can include a graphical investor interface displaying a risk and a differential return of the entire investor portfolio relative to standard industry measurements to the investor and on absolute scales. Also, the investor program enables the investor to adjust the percentage allocation of investment assets and the investor portfolio. Moreover, the investor program communicates to the processor as trading data via one of the communication links investor identification information along with any trades of assets/liabilities to be executed to create or modify an investor's portfolio to ensure an investor's actual portfolio matches an investor's desired portfolio. (see column 12 lines 35-50) and unlike all traditional brokerages that charge a commission or a fee based on a per transaction basis, or that receive their compensation (including items like payment for order flow) on a per share or per trade basis because they make their money from investors trading, the investor under the present invention can be charged a flat periodic fee (such as a monthly or annual fee as might be charged by certain financial planners) or an asset based fee comprised of a certain amount of the assets held in the system (such as are usually charged by mutual funds), or a combination of such periodic and asset based fees, or a combination of such fees and a transaction based fee. (see column 12 line 65 and column 13 line 5) and allocation factor for security specifying a percentage of total amount (See column 26 lines 10-25 and column 27 lines 30-35 and column 11 lines 30-40).

Therefore it would have been to one of ordinary skill in the art at the time the invention was made to modify the teachings of Keiser to include wherein the investment vehicle enables the investors to organize using graphical user interface, holdings in the corresponding accounts into one or more groups that can be defined by the investors to suit the investors portfolio structuring desires, wherein for each account, the corresponding investor can specify an allocation factor for each security, for each group and for each sub-group included in the account, the allocation factor for a group specifying a percentage of a total amount to be used to purchase interests in securities for the account in which the group is located, the allocation factor for a sub-group

Art Unit: 3628

specifying a percentage of a total amount to be used to purchase interests in securities for the group in which the sub-group is located, and the allocation factor for a security specifying a percentage of a total amount to be to be used to purchase interests in securities for the group or sub-group in which the security is located, or if the security is not in a group or sub-group, a percentage of the total amount to be used to purchase interests in securities for the account in which the security is located.

taught by Wallman in order to electronically trade and invest in securities or other assets, rights or liabilities, such as commodities or futures. More particularly, the present invention relates to a method and apparatus for electronically trading over wired and wireless networks, including over the Internet, and investing in securities or other assets, rights or liabilities that enables a user, at a reasonable cost, to create and manage a complex and diversified portfolio of such securities or other assets, rights or liabilities.

As per claims 5, 20, Keiser discloses an investment vehicle for enabling a plurality of investors to selectively buy and sell interests in each of a plurality of different individual securities traded on at least one financial market, comprising:
a plurality of accounts through which the plurality of investors can buy and sell the interests in the plurality of securities, each of the accounts corresponding to at least one of the plurality of investors. (Note abstract and see column 2 lines 10-20) and a graphical user interface. (see column 2 lines 60-65).

Keiser fails to teach wherein for each account corresponding investor or investor can organizing holdings in the account in a hierarchical nature and wherein the investor or investors is provided with a visual representation of the account showing the hierarchical nature and wherein the graphical user interface provides the investors with dynamically re-configurable building blocks, each representing at least one of a security and a group of securities held in the accounts, to enable the investors to build, re-configure and manage the accounts in a visually intuitive manner and to visually offer the investors portfolio information for the account and an investor program that allows an investor to create and modify an investor portfolio according to the investor's

Art Unit: 3628

desired.(see column 12 line 50 and column 17 lines 20-30 and column 19 lines 45-65 and column 20 line 5-15).

However Wallman discloses a computer-based system, without incurring any additional costs, investors to purchase or sell small--and even fractional-units of shares.(See column 21 lines 15-60) and additionally, if a group of investors so desire, the investors can all provide information to the system so that other investors who they permit or who are in their same group can have access to the overall portfolio of the group as a whole--either for monitoring purposes or for analysis or for trade execution. In such instance the system would identify the group as a separate group within the general demographic database, and access to the portfolio and securities maintained by the group or the leaders of the group would be permitted to members of the group.(see column 40 lines 30-35) and The investor program can include a graphical investor interface displaying a risk and a differential return of the entire investor portfolio relative to standard industry measurements to the investor and on absolute scales. Also, the investor program enables the investor to adjust the percentage allocation of investment assets and the investor portfolio. (See column 12 lines 35-45).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings Keiser to include wherein for each account corresponding investor or investor can organizing holdings in the account in a hierarchical nature and wherein the investor or investors is provided with a visual representation of the account showing the hierarchical nature and wherein the graphical user interface provides the investors with dynamically re-configurable building blocks, each representing at least one of a security and a group of securities held in the accounts, to enable the investors to build, re-configure and manage the accounts in a visually intuitive manner and to visually offer the investors portfolio information for the account taught by Wallman in order to modify and display his/her holdings in an hierarchical order.

As per claim 6, Keiser fails to teach the investor can specify for holdings in percentages of the total value of the account to which the values of the holdings should correspond, and wherein the investment vehicle reviews the investor's account and compares the holdings in the account with the specified percentages, and upon finding

Art Unit: 3628

a discrepancy between the actual holdings and the specified percentages, which discrepancy is above a level set by the investor, notifies the investor of the discrepancy. However Wallman discloses once the investor selects his desired portfolio based on his various preferences as to specific assets or liabilities to be included in the portfolio, that portfolio may include different historical and expected levels of return than necessary to achieve the investor's stated financial goals and provides an indication to the investor that these selections now require a modification of either the investor's specific asset/liability preferences or the percentage allocation to reach his investment objectives. The system does this by comparing the historical and expected rates of returns of the investor's portfolio to the rates of return assumed in the asset allocation models using known probabilistic methods including value at risk and sensitivity analysis, and when determining a difference exists, suggesting an adjustment in the percentage allocation to correct for the difference so that the desired financial goals can be achieved within the constraints set by the investor. To the extent these goals cannot be achieved, the present invention informs the investor that the risk return levels are not sufficient to reach the established goals. Moreover, the system provides further information to the investor as to what returns and levels of investment would be necessary to satisfy various financial goals modified to take into account the investor's risk preferences as provided to the system. In addition, the asset allocation model to be used utilizes probabilistic estimates of the likelihood of meeting those goals given various asset allocations. In the case where the investor steps through this series of inquiries in the asset allocation model-which, as noted, is optional-the investor is presented with an output that is then used as an input to the next stage: namely, building the specific portfolio.

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of keiser to include specifying for holdings in percentages of the total value of the account to which the values of the holdings should correspond, and wherein the investment vehicle reviews the investor's account and compares the holdings in the account with the specified percentages, and upon finding a discrepancy between the actual holdings and the specified percentages, which

Art Unit: 3628

discrepancy is above a level set by the investor, notifies the investor of the discrepancy taught by Wallman in order to compares the holdings in the account with the based on specified percentages.

As per claim 7, Keiser discloses an investment vehicle for enabling a plurality of investors to selectively buy and sell interests in each of a plurality of different individual securities traded on at least one financial market, comprising:

a plurality of accounts through which the plurality of investors can transmit orders to buy and sell the interests in the plurality of securities, each of the accounts corresponding to at least one of the plurality of investors.(Note abstract and see column 2 lines 10-20 and column 25 line 25).

Keiser fails to teach wherein each of the orders can include one or more limit requests, and wherein each of the one or more limit requests can apply to a plurality of securities included in the order.

However Wallman discloses brokerage is permitted in some self-directed retirement accounts established by employers such as 401(k)s), but not permitted in many. The reason, in part, is that employers are concerned that employees, especially somewhat less sophisticated employees, will not fully appreciate the risks of investing and may invest in too risky a security, or not a sufficiently diversified portfolio, and therefore potentially lose much or all of their expected retirement.

Consequently, employers limit the choices that employees may select by offering them a limited number of investment choices, which because employers want to provide diversification within each investment vehicle so offered has generally meant, almost exclusively, various types of funds. Brokerage has not been offered because there was no way to ensure that an employee would invest in a diversified portfolio with specified maximum risk levels (hence the practice of forcing employees to invest in selected funds.(See column 9 lines 10-25).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Keiser to include orders can include one or more limit requests, and wherein each of the one or more limit requests can apply to

Art Unit: 3628

a plurality of securities included in the order in order to provide investors with limited funds to invest.

CONCLUSION

Response to Arguments

5. Applicant's arguments filed on 01/29/2004 have been fully considered but are persuasive for the following reasons.

6. In response to applicant's arguments regarding Keiser and Wallman.

In response Applicant's arguments that neither Keiser or Wallman reference teaches, "a graphical user interface that can be used to organize account holdings in one or more groups or subgroups, where the groups or sub group can be defined by an investor to suit an investor's portfolio structuring desires" this limitation is disclosed in a combination of teachings Keiser as states, a graphical user interface for screens displaying instruments with prices. (Note fig 10 and see column 2 lines 60-65 and column 7 lines 35-65 and column 8 line 5 and column and column 15 lines 5-50) and Wallman states a graphical user interface and adjusting percentages of investments assets and portfolio and an investor program that allows an investor to create and modify an investor portfolio according to the investor's desired. (see column 12 line 50 and column 17 lines 20-30 and column 19 lines 45-65 and column 20 line 5-15 and see 12 lines 35-50).

It would have been obviously clear that the teachings of Keiser modified to include a graphical user interface and the features that allows an investor to create and modify an investor portfolio according to the investor's desired as stated by Wallman could be used by an investor to display and organize account holdings in to one or more groups or sub group, where the groups or sub group can be defined by an investor to suit an investor's portfolio structuring desires.

In response Applicant's arguments that neither reference teaches, "a graphical user interface that provides an investor with dynamically re-configurable building blocks, each representing at least one of a security and a group of securities held in the accounts, to enable the investors to build, re-configure and manage the accounts in a

Art Unit: 3628

visually intuitive manner and to visually offer the investors portfolio information for the account" this limitation is disclose in a combination of teachings Keiser states, a graphical user interface for screens displaying instruments with prices. Note fig 10 and see column 2 lines 60-65 and column 7 lines 35-65 and column 8 line 5 and column and column 15 lines 5-50) and Wallman states a graphical user interface and adjusting percentages of investments assets and portfolio and an investor program that allows an investor to create and modify an investor portfolio according to the investor's desired. see column 12 line 50 and column 17 lines 20-30 and column 19 lines 45-65 and column 20 line 5-15 and see 12 lines 35-50.

It would have been obvious that the teachings of Keiser modified to include a graphical user interface and the features that allows an investor to create and modify an investor portfolio according to the investor's desired as stated by Wallman could have facilitate the use of a graphical user interface that provides an investor with dynamically re-configurable building blocks, each representing at least one of a security and a group of securities held in the accounts, to enable the investors to build, re-configure and manage the accounts in a visually intuitive manner and to visually offer the investors portfolio information for the account.

In response Applicant's arguments that Wallman fails to teach, "dynamically interactive graphical user interface that can be used to build and re-configure and manage a hierarchical account in a visually intuitive way to allow the investor to easily determine and understand the relationship between all securities in an account, as does the claimed invention" Applicant's is reminded that all the arguments was claimed and those that were claimed were previously addressed where Wallman states a graphical user interface and adjusting percentages of investments assets and portfolio and an investor program that allows an investor to create and modify an investor portfolio according to the investor's desired. see column 12 line 50 and column 17 lines 20-30 and column 19 lines 45-65 and column 20 line 5-15 and see 12 lines 35-50.

Therefore it would have been obvious that the teachings of Wallman could have facilitated the use of a graphical user interface that provides an investor with

Art Unit: 3628

dynamically interactive graphical user interface that can be used to build and re-configure and manage a hierarchical account in a visually intuitive way to allow the investor to easily determine and understand the relationship between all securities in an account, as does the claimed invention.

7. In response to applicant arguments against the references individually, one cannot show nonobviousness by attacking the reference individually where the rejections are based on a combination of references. See *In Keller*, 642 F.2d, 208 USPQ 871 (CCPA 1981); *In re Merk & Co.*, 800 F.2d 1091, 231 USPTQ 375 (Fed. Cir. 1986).

8. In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., are not recited in the rejected claim(s). Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

10 Any inquiry concerning this communication or earlier communications from the examiner should be directed to Clement B Graham whose telephone number is 703-305-1874. The examiner can normally be reached on 7am to 5pm.

Art Unit: 3628

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hyung S. Sough can be reached on 703-308-0505. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-0040 for regular communications and 703-305-0040 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-3900.
